DETAILED ACTION

Allowable Subject Matter

1. Claims 1-12 are allowed.
2. The following is an examiner's statement of reasons for allowance: the prior art fails to disclose a plurality of channel circuits which are respectively provided for radio channels used in the mobile radio communication system, convert transmission data, which are to be transmitted to radio terminals call-connected through the radio channels, into baseband transmission signals, output the signals to the external radio device with arbitrary transmission power, and output baseband reception signals from the external radio device as reception data from the radio terminals; loopback test means for testing a transmission function or a reception function of an arbitrary channel circuit by looping back a predetermined test signal, inside the apparatus, which is output from a transmitting-side channel circuit, of said channel circuits, which serves as a transmitting side in a loopback test, and by receiving the test signal through a receiving-side channel circuit of said channel circuits which serves as a receiving side in the loopback test, as in claim 1; testing the transmission function or the reception function of the apparatus by transmitting/receiving a predetermined test signal upon looping back the signal inside the apparatus; determining transmission power for the test signal in accordance with the number of call connections of a radio terminal in the radio base station apparatus; and adjusting the transmission power of the test signal on the basis of the transmission power, as in claim 6; determining transmission power comprises a step of using, as the transmission power of a test signal, power obtained by adding 3 dB to transmission power of a transmission signal which is transmitted to a radio terminal when a call connection count is 1, when a number of call

connections is not less than 32 and less than 64, as in claim 11; characterized in that a step of determining transmission power comprises a step of using, as the transmission power of a test signal, power obtained by adding 18 dB to transmission power of a transmission signal which is transmitted to a radio terminal when a call connection count is 1, when a number of call connections is not less than 64, as in claim 12.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
